It currently consists of 1 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

NOTE: This is a 'working draft' sequence. It currently
consists of 2 contigs. The true order of the pieces
is not known and their order in this sequence record is
                                                                                                                                                                                                                                    arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence
                                                                                                                                                                              as soon as it is available and the accession number be preserved.

Krol,J. and Skorupska,A.

Identification of genes in Rhizobium leguminosarum bv. trifolii
whose products are homologues to a family of ATP-binding proteins
Microbiology 143 (Pt 4), 1389–1394 (1997)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              (AAW23076) of Archaeoglobus fulgidus VC16, an isolate that grows optimally at 85 deg C and pH 7.0. It can be amplified from a pBluescript vector by PCR (see AAT79317-18). Claimed, newly identified polynucleotides (AAT79321-30) encoding esterases (AAW23069-77, AAW23088) were recovered from genomic gene libraries. They can be used for recombinant production of the enzymes in host cells, and as probes to identify related sequences. The esterases are stable at high temperature and in organic solvents, making them superior for use in production of pure chiral compounds used in pharmaceutical, agricultural and other chemical industries. A method is claimed for transferring an amino group from an amino acid to an alpha-keto acid using a claimed esterase. The enzymes can'd to an alpha-keto acid using a claimed esterase. The enzymes can'd salso be useful as ripening starters in cheese making, in lighin removal in paper and pulp manufacture, in carbohydrate derivative synthesis, in fermentable sugar production from lighocellulosic waste, in the study of plant wall structure, plant resistance to disease and organic matter decomposition and to select plants bred for production of highly degradable animal feeds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

The genomic sequence of H. pylori (ATCC 55679) was determined from coverlapping contigs generated by mechanically shearing the bacterial DNA. The sequences were analysed for ORF of at least 180 nucleotides, and the predicted coding regions defined by computer evaluation. To identify likely H. pylori antigens for vaccine development, the amino carid sequences predicted from various ORF were analysed for significant homology to other known or exported membrane proteins. Having identified and determined the sequences of interest, particular regions can be isolated from H. pylori by PCR amplification for recombinant polypeptide C isolated from H. pylori by PCR amplification for recombinant polypeptide C Note: This DNA sequence is not reproduced in the specification and case when derived from the related specification, W09719098.

H. pylori inner membrane protein ORF 486075.aa

```
are used to evaluate compounds, especially activators or inhibitors of bacterial life cycle, for the ability to bind an H. pylori nucleic acid sequence. The nucleic acid sequences, and corresponding proteins, are 20 also useful for generating vaccines for immunising subjects against H. 21 color or for use in detecting the presence of Helicobacter species in 22 a sample. Antisense nucleic acid sequences of these sequences are 23 cused to inhibit expression of a gene from Helicobacter species. H. 26 cused to inhibit expression of a gene from Helicobacter species. H. 27 cused to inhibit expression of a gene from Helicobacter species. H. 27 cused to inhibit expression of a gene from Helicobacter species. H. 27 cused to inhibit expression of a gene from Helicobacter species. H. 27 cused to inhibit expression of a gene from Helicobacter species. H. 27 cused to inhibit expression of a gene from Helicobacter species. H. 28 cused to inhibit expression of a gene from Helicobacter species. H. 28 cused to inhibit expression of a gene from Helicobacter species. H. 28 cused to inhibit expression of a gene from Helicobacter species. H. 28 cused to inhibit expression of a gene from Helicobacter species. H. 28 cused to inhibit expression of a gene from Helicobacter species. H. 29 cused to inhibit expression of a gene from Helicobacter species. H. 20 cused to inhibit expression of the section of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

                   AAX35694-X35747 represent cDNA sequences that encode novel polypeptides (AAY02358-84) which are identified from a human placental cDNA library by the signal sequence trap (SST) method. The polypeptides have a broad range of physiological activity, including immunisation against and inhibition of infections, allergies and cancer; regulation of tissue formation and repair; activin/inhibin activity; Chemokine/Cytokine activity; blood coagulation regulation; and receptor/ligand agonist or antagonist activity. The polypeptides can be used for prevention and treatment of disorders including infections by bacteria, yeasts and viruses (including HIV) and protozoa; metabolic and hormonal disorders; inmune disorders (including severe combined immunodeficiency (SCID) and AIDS; thrombosis; cancer; and traumatic or surgical wounds.

                                                                                                                                                                                                                             AAX35694-X35747 represent cDNA sequences that encode novel polypeptides (AAY02338-84) which are identified from a human placental cDNA library by the signal sequence trap (SST) method The polypeptides have a broad range of physiological activity, including immunisation against and inhibition of infections, allergies and cancer; regulation of tissue formation and repair; activiny/inhibin activity; chemokine/cytokine activity; blood coagulation regulation; and receptor/ligand agonist or antagonist activity. The polypeptides can be used for prevention and treatment of disorders including infections by bacteria, yeasts and viruses (including HIV) and protozoa; metabolic and hormonal disorders; immune disorders (including severe combined immunodeficiency (SCID)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             infection; allergy; cancer; regulation; tissue formation; tissue repa

Fragments of HEC are used to detect HEC-encoding nucleic acid, in usual hybridisation or amplification assays, while antibodies are used in conventional immunoassays to detect HEC or peptides. HEC is used to modulate cell cycle progression (by disrupting chromatid separation) and antibodies are used to disorder sister chromatid alignment and separation in interphase cells, disrupting mitosis, particularly for control of malignancy and other cell growth abnormalities at the mitosis stage. Antibodies can also be used for protein purification, to

                                                                                                                                                    Coloned from a human B cell cDNA library by its interaction with the Co-terminus of Rb in a yeast two-hybrid system. This fragment was used as a probe to screen a human B cell cDNA library, and the Colonest clone obtained included the full-length coding sequence for HEC. HEC nucleic acid segments and their encoded polypeptides are important in modulating mitosis and thus regulating cell modulating mitosis and thus regulating cell modulating mitosis and thus regulating cell malignancies and other cell growth abnormalities at the cell mitosis stage. DNA segments encoding HEC are also useful to produce HEC protein/peptides and to detect HEC-encoding sequences (e.g. from related species), by contacting with a nucleic acid sample under suitable conditions and detecting hybridisation (claimed kits are provided). HEC peptides are useful in vaccines
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                PR XX

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAH81781/c
                                        modulating expression of (I) (by gene therapy, antisense RNA or ribozy methods) or by modulating the amount and/or location of (I)-encoded polypeptides (by administration of the polypeptide or its activator, antibody (optionally as a conjugate) or inhibitor). The method allows identification of many Class II tumour suppressor genes (i.e. genes the are not primary targets for tumour initiating mutations). AAH81492-AAH82376 represent the human and rat derived nucleic acid fragments described in the method of the invention.
          Sequence
                                                                                                                                                                                                                       effects of an active compound (potential pharmaceutical) on a cell line, particularly for diagnosis and treatment of tumors, especially by modulating expression of (I) (by gene therapy, antisense RNA or ribozyme
                                                                                                                                                                                                                                                                                suppressor genes. (I), and polypeptides encoded by them, are useful as targets for diagnosis or therapy and in screening to determine the
                                                                                                                                                                                                                                                                                                                                This invention describes a nucleic acid (I) with differential expression between tumour and normal cells and which has cytostatic activity. (I) work as modulators of Ras activity by inducing expression of tumour
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Nucleic acids differentially expressed between tumor and normal cells, useful for diagnosis or therapy of tumors and for screening active

For example, some of the identified proteins could be components of vaccines against Meningococcus B; against all serotypes; and/or against all pathogenic Neissariae. Identification of sequences from the bacterium will also facilitate production of biological probes, particularly organism-specific probes. Attempts to make efficacious Meningococcus B vaccines have failed mainly due to antigen tolerance. Multivalent vaccines have failed mainly due to antigen tolerance sequences may provide an opportunity. The provision of further, complete sequences may provide an opportunity to identify secreted or surface exposed proteins that may be presumed targets for the immune system and which are not antigenically variable or at least more conserved than
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          N. meningitidis partial DNA sequence gnm_25 SEQ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     04-DEC-2000
                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes methods of obtaining immunogenic proteins from Neisseria genomic sequences. AAA81453 to AAA82414 represent specifically claimed Neisseria meningitidis genomic DNA sequences; AAA81260 to AAA81303 and AAB25620 to AAB25663 represent Neisseria DNA sequences and their corresponding proteins; AAA81254 the AAA81259 and AAA81301 represent PCR primers used in the isolation of Neisseria meningitidis DNA sequences; and AAA81322 to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Isolated nucleotide sequences of Neisseria meningitidis which can be used in the diagnosis and treatment of N. meningitidis infection and other Neisserial infections, for example, N.gonorrhoea -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAA81477;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAA81477 standard; DNA; 26778 BP

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ID XXX ACC XXX
The present invention describes the full length genome of CC Neisseria meningitidis B (NMB). The sequences in AAF21544 and AAF21607 cc to AAF21613 represent fragments of the NMB genomic sequence, as the CC sequence was too long to go in a record on its own it was split into 8 cc sequences which overlap each other at the beginning and end of each CC sequence by 4980 bp (i.e. the last 49980 bp of AAF21544 is repeated at CC the beginning of AAF21607, the last 49980 bp of AAF21547 are repeated at CC the beginning of AAF21608, and so on). AAF21545 to AAF21588 encode the CC Neisseria proteins given in AABS8550 to AAF82554 to AAF21588 encode the CC Neisseria proteins given in AABS8550 to AAF825593, and AAF21589 to CC Neisseria invention. The NMB genome and fragments from it have CC Neisserial activity, and can be used in vaccines and gene therapy. CC Neisserial activity, and can be used in vaccines and gene therapy. CC Neisserial bacteria or as a diagnostic reagent for detection the proteins can be used in compositions for treating or preventing infection CC presence of Neisserial bacteria or of antibodies which binds to the presence of Neisserial bacteria or of antibodies raised to Neisserial bacteria or as a diagnostic reagent for detecting the Dateria. Computers, computer memory, computer seding frames (ORFs) or coding sequences within the NMB genome. The DNA sequences provide concert ferferity of in vaccines than the outer membrane proteins currently
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               30-APR-1999;

of T-lymphocytes, the release of a cytokine from peripheral blood monocytes (PBMCs), or the proliferation of endothelial cells. Some of the PRO polypeptides may modulate glucose or free fatty acid uptake by skeletal muscle cells or by adipocytes; or inhibit binding of A-peptide to factor VIIA. The PRO polypeptides can be used in assays to identify molecules involved in binding interactions. The polynucleotides encoding PRO polypeptides can be used to generate probes, antisense RNA/DNA, transgenic or knock out animals and can be used in gene therapy.
                                                                                                                                                                                                                                                             PRO polypeptides, and to detect the presence of mammalian lung, colon, breast, prostate, rectal, cervical or liver tumours by comparing PRO polypeptide expression in a cell sample to that in a control sample. Some of the 275 sequences are also useful to stimulate the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, the proliferation or differentiation of chondrocytes, the proliferation or gene expression in perioyte cells, the release of proteoglycans from cartilage, the proliferation of inner ear utricular supporting cells or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   secreted proteins, and the polynucleotides encoding them, are predicted to have biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals. Suggested activities include nutritional activity, cytokine and cell proliferation/differentiation activity, immune stimulating (e.g. as vaccines) or suppressing activity, haematopolesis regulating activity, tissue growth activity, activity/inhibin activity, chemotactic/chemokinetic activity, activity/inhibin activity, cativity, receptor/ligand activity, anti-inflammatory activity, cativity, receptor/ligand activity, anti-inflammatory activity, cativity. The polynucleotides are also stated to be useful for gene therapy. AAZ33316 to AAZ33373 encode human secreted proteins, and AAY52998 to AAY53060 represent human secreted proteins, given in the present inversely.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Jacobs K,

The present invention describes primer sets for synthesising 5602 cc full-length cDNAs defined in the specification. Where a primer set cc comprises: (a) an oligo-dT primer and an oligonucleotide complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the coligonucleotide comprises at least 15 nucleotide; or (b) a combination of an oligonucleotide comprising a sequence complementary strand of a polynucleotide which comprises a 5'-end cc onlyonucleotide which comprises a 1'-end sequence complementary to a coligonucleotide which comprises a 3'-end sequence complementary to a coligonucleotide comprises a 1'-end sequence, where the coligonucleotide comprises a 3'-end sequence, where the polynucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in cc the specification. The primer sets can be used in antisense therapy and cf in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs seasily without any specialised methods. AAH33165 to AAH3628 and CAAH33633 to AAH18742 represent human cold sequences; and AAH33629 to AAH3632 crepresent oligonucleotides, all of which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        29-JUL-1999;

                                                                                                                                                                                             the new polypeptides in a sample or by determining the presence or absence of mutations in the new polynucleotides. Specific uses are described for each of the 70 polynucleotides, based on which tissues they are most highly expressed in, and include developing products for the diagnosis or treatment of cancer, tumours, neurodegenerative disorders, developmental abnormalities and foetal deficiencies, blood discretes, leukemias, diseases of the immune system, autoimmune diseases, hepatic and renal disease, lymphomas, inflammation, allergies, schizophrenia, osteoporosis, arthritis, psoriasis, digestive/endocrine invention are represented in AAY07744-Y07850 and the encoding nucleic
                                                                                                                                                                                                                                                                                                                                                           This invention describes novel isolated human secreted proteins and their encoding nucleic acid sequences. The products of the invention are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also pathological conditions can be diagnosed by determining the presence or amount of expression of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Brewer LA, L
                                                                                                                                                                 Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated human genes and the secreted polypeptides they encode - useful for diagnosis and treatment of e.g. cancers, neurological disorders, immune diseases, inflammation or blood disorders

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAH01309
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               RESULT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              and/or primers and parasition acids of determined algal, archaeal, bacterial, fungal and parasitis species with a combination of defined primer pairs. The method can used for producing probes and/or primers for detecting one or more used for producing probes and/or primers for detecting and used for producing probes and/or primers for detecting and used for producing probes and/or primers for detecting and used for producing probes and/or primers for detecting and used for producing probes and/or primers for detecting one or more used for producing probes and/or primers for detecting one or more used for producing probes and/or primers for detecting one or more used for producing probes and/or primers for detecting one or more used for producing probes and/or primers for detecting one or more used for producing probes and/or primers for detecting one or more used for producing probes and/or primers for detecting one or more used for producing probes and/or primers for detecting one or more used for producing probes and/or primers for detecting one or more used for producing probes and/or primers for detecting one or more used for producing probes and/or primers for detecting one or more used for producing probes and/or primers for detecting one or more used for producing probes and producing probes and producing problem and producing producing problem and producing problem and producing pr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes a method for generating a repertory of nucleic acids of tuf, fus, atpD and/or recA genes from which probes and/or primers are derived. The method comprises amplifying the nucleic acids of determined algal, archaeal, bacterial, fungal and parasitical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Nucleic acid sequences are used to generate universal probes and primers which can be used to identify and detect the presence of algal, archaeal, bacterial, fungal and parasitical species in a test sample -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Disclosure; Page 1109-1110; 1580pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Picard
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Bergeron

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             DB seq length: 0
